

APPENDIX O

Summary of Public Meetings and Hearings

SUMMARY of PUBLIC MEETINGS

The Wastewater Treatment Plant Master Plan was discussed at a public meeting of the District on May 10th, 2010. At that meeting the Master Plan report analyses, conclusions and recommendations were presented by Warren Mesloh PE of The Engineering Company. It was recommended at this meeting that the District pursue funding, design and construction of a new mechanical wastewater treatment plant to provide adequate future service given the necessity of having to provide nitrified effluent in the near future. A review of the alternatives was presented with discussion of the recommended alternative, an Orbal extended aeration system. The cost estimate presented was \$10,800,000. It was further discussed that the board should (continue to) fund continued sewer line reparations in an attempt to reduce the incidence of ground water infiltration into the system. There were no questions or comment from the general public. The board approved the WWTP Master Plan document.

It was also discussed that the District would have to conduct a public hearing on this proposed project with a published 30 day notice as to the nature of the hearing. This will be scheduled in the near future.
